

EMV solutions that  
**protect and connect**

## stay protected, stay current

When your library is compliant with the new EMV standards, you are protecting your library and your patrons from credit card fraud. And when your library is up to speed, you stay relevant in the eyes of your community.

**protect your library and your community** | With EMV chip payments as the new standard, the liability for credit card fraud shifts to the least compliant entity...so those who do not upgrade could be liable for fraudulent charges. Also, as more merchants move towards EMV, criminals may target those who are still using less secure systems.

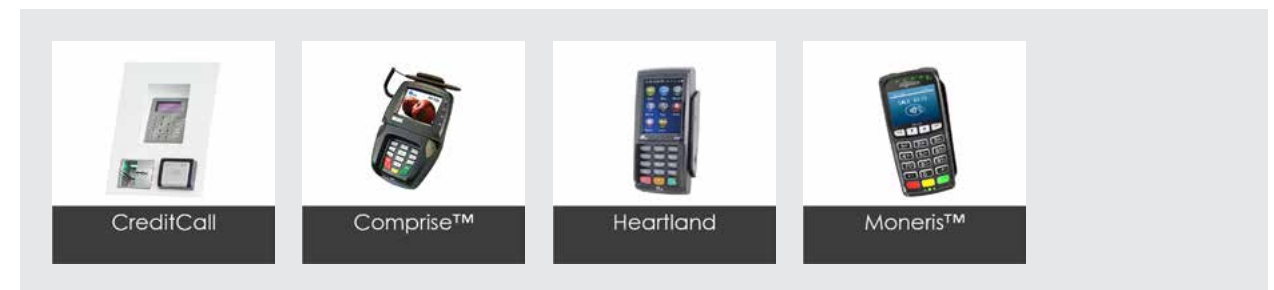

**add more convenience** | Staying current with payment systems and other merchants makes the self-service option at your library even more convenient for your patrons. These systems accept more types of payment, which makes this an important part of staying relevant to your community.

**technical expertise** | Our technical experts have devoted countless hours in developing an intrinsic knowledge and understanding of the issues surrounding credit card payment compliance. They've worked very closely with governing organizations to make sure the products we offer our customers will meet all criteria. When choosing our solutions, you can be assured that you have a team of experts behind your decision!

**variety of options** | We understand that one solution does not fit all. Our suite of EMV-compliant credit card payment solutions offers libraries a variety of options from which to choose. We have joined with several trusted partners so you can feel confident in the security of the payment process.

|                               | CreditCall                                      | Comprise Smart Terminal™      | Heartland                                       | Moneris                       |
